RE: DNA TESTING & INTERNATIONAL REGISTRATION OF KURDISH HORSES

To Whom It May Concern;

The results of DNA Testing of Kurdish Horses in the Province of Kermanshah Iran have been received from Australian Equine Genetics Research Centre and The Australian Stud Book.

In total 192 (one hundred and ninety two) horses were tested establishing a DNA profile for the Kurdish Horse and enabling the international registration and the country designation (IRA) to be allocated to the breed clearly defining it as an Iranian breed of horse.

Unfortunately not all horse owners have paid the fee for testing of horses and only 93 (ninety three) results have been returned (see list attached).

Those horse owners who failed to pay the prescribed fee will now have to deal directly with the Australian Stud Book (contact details can be obtained from our website [www.kurdishhorse.org](http://www.kurdishhorse.org)) to both pay the amount in full together with any outstanding penalties and obtain their results.

Our company has incurred considerable expense and had to deal with delays caused both by the actions of horse owners and other individuals.

The potential to establish a viable industry based upon the results received and the interest generated is evidenced by letters of congratulation now being forwarded to the Presidents Office on behalf of Equestrian Organisations and Governments worldwide.

The results will be announced in accordance with arrangements in place the Equestrian Federation of the Islamic Republic of Iran.

Yours truly,

Alan Riely  
**Australian Agricultural Resources Group Pty Ltd**
